

# Medium, an efficient, effective, ride-on sweeping machine.

**DUSTER MEDIUM** is DUSTER's answer for the new segment of high-productivity compact sweeping machines for cleaning small surfaces or medium sized areas where there are many obstacles. Its strength, compact size and battery powered drive make it especially suitable for use whenever working speed needs to be combined with manoeuvrability in indoor environments.

With a 60 cm central broom and rear loading, **DUSTER MEDIUM** is suitable to use for removing dust and solid dirt on any type of floor and has

a performance capacity of some 4000 m<sup>2</sup>/h. The dirt hopper holds up to 65 l.

The controls are of the touch less system type with immediate activation: the central and side brush start working without any other control being operated.

Thanks to its size, mm 1250 x 1200 x 780, and to the front drive wheel the machine is comfortable to drive and manoeuvrable under any condition. The electric filter shaker ensures appropriate filter cleaning.

Debris hopper (metal option). The dirt hopper can be removed from the back for easy emptying. The dirt hopper can hold as many as 65 l.

The central broom can easily be adjusted without the help of any tools.

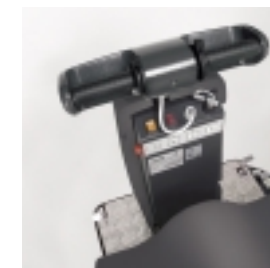

The central and side brush can easily be replaced without the help of any tools.

The side brush is protected from damage by a strong metal cover.

The panel filter can easily be removed, without requiring any tools, for thorough cleaning and replacement.

It is comfortable to drive and the controls are extremely simple and functional. The machine is equipped also with an audible warning horn. There are three operating options:

- Forward drive with brushes on/backward drive with brooms on;
- Forward/backward drive for transport purposes, with brushes off;
- Brooms rotation system connected to traction.

Suction is closed off automatically during operation of the electric filter shaker.

Excellent manoeuvrability is guaranteed by the motorised front drive wheel system. To collect bulky debris the machine is equipped with front flap lifting system.
